

LN-VAVLF-2, LN-VAVLN-2, and LN-VVTLF-2

LN Series VAV and VVT Controllers

Description

The LN Series LN-VAVLF-2, LN-VAVLN-2, and LN-VVTLF-2 controllers use the latest technology to provide you with more flexibility and reliability of control. The LN VAV/VVT controllers are designed to meet the requirements of single duct Variable Air Volume (VAV) or Variable Air Volume and Temperature (VVT) applications.

The LN-VAVLF-2, LN-VAVLN-2, and LN-VVTLF-2 controllers are based on LONWORKS® technology for interoperability and peer-to-peer communication between controllers without any intermediary, but also integrate seamlessly into the Metasys® system.

For additional information, see the *LN Series Variable Air Volume (VAV) and Variable Air Volume and Temperature (VVT) Controllers Product Bulletin (LIT-12011298)*.

Features

- configurable software - features an LNS plug-in which provides the ability to easily configure inputs, outputs, and sequence options.

Configured device complies with LONMARK® Space Comfort Control (SCC) profile for interoperability with other LONMARK devices.

- robust hardware - allows you to use any commercially available thermistor type (100 ohms to 100k ohms) and setpoint potentiometer type. Features an extremely accurate onboard airflow sensor for pressure independent single duct VAV applications. The controller can read differential pressure as small as 0.04 milli-inches.
- wireless functionality - features an optional EnOcean® wireless receiver (LN-WMOD315-0 or LN-WMOD868-0) that you can use with a variety of wireless sensors and switches. The wireless receiver (LN-WMODxxx-0) supports up to 14 wireless inputs, which allow you to create wire-free installations.
- powerful control options - perform Demand Control Ventilation based on CO₂ sensor readings to ensure high indoor air quality in an efficient manner. Provides you with the ability to link VAV occupancy status with local lighting control.
