Description

The M9109 Series direct-mount electric actuators operate on AC 24 V power and are available for use with floating or proportional controllers. These non-spring-return actuators are easily installed on a VAV box, a round damper shaft up to 1/2 in. (13 mm) in diameter, or a 3/8 in. (10 mm) square shaft. The M9109 with an M9000-520 linkage can be used to control 2 in. (DN50) VG1000 Series ball valves.

The M9109 models have 80 lb·in (9 N·m) running torque. They have a nominal 60-second travel time for 90° of rotation at 60 Hz (72 seconds at 50 Hz) with a load-independent rotation time. The M9109-xGC-2 models are available with integral auxiliary switches to perform switching functions at any angle within the selected rotation range.

Refer to the *M9109 Series Electric Non-Spring-Return Actuators Product Bulletin (LIT-120112)* for important product application information.

Applications

The M9109 is used to position balancing, control, round, and zone dampers in typical HVAC applications. It can also be used with an M9000-520 linkage to control VG1000 Series ball valves. The M9109 mounts directly on the duct surface, round damper, or small rectangular damper with an anti-rotation bracket and two sheet metal screws (included). Additional linkages or couplers are not required. For more information, refer to the *M9109 Series Electric Non-Spring-Return Actuators Installation Instructions (Part No. 34-636-1190)*.

Repair information

If the M9109-xGx-2 Series Electric Actuator fails to operate within its specifications, replace the unit. For a replacement actuator, contact the nearest Johnson Controls® representative.

- ¹ To avoid excessive wear or drive time on the motor for the -AGx models, use a controller and/or software that provides a time-out function to remove the signal at the end of rotation (stall). The -GGx models have an auto shutoff to avoid excessive wear or drive time on the motor.
