

VA7800 Series Electric Valve Actuators

Product Bulletin

VA7800 Series

Code No. LIT-12011474

Issued May 2021

The VA7800 Series of Electric Valve Actuators control VG7000 Series Bronze Globe Valves in Heating, Ventilating, and Air Conditioning (HVAC) systems. The VA7800 Series produces a minimum linear output force of 180 lb (800 N) and is ordered field mounted or factory coupled to 1 in. and 2 in. VG7000 Series Bronze Globe Valves with brass trim and to 1/2 in. through 2 in. VG7000 Series Bronze Globe Valves with stainless steel trim. All actuators are direct mount and available in both Spring Return and Non-Spring Return models.

Spring Return models ship from the factory set for DC 0 to 10 V Proportional Control. With a change of DIP switch settings, this model can be field configured to On/Off or Floating Control. In addition to these settings, optional auxiliary switches are also available.

Non-Spring Return models are available in AC 24 V On/Off (Floating) Control, or DC 0 to 10 V Proportional Control. Models are available with or without optional auxiliary switches.

Figure 1: VA7800 Actuator

Table 1: Features and benefits

Features	Benefits
Automatic Stroke Adjustment	Provides easy, quick, and precise commissioning.
Manual Override as Standard	Allows manual positioning of valve for easy commissioning and servicing.
NEMA 2 (IP54) Enclosure Protection	Allows installation in a wide range of environments.
Unique Swing-Gate Yoke	Offers fast and secure attachment to the valve.
Brushless Motor	Ensures low energy consumption and long life.
Proportional Model	Enables one model to be used for various control types.
Force-Controlled Motor Shut-Off	Reduces energy consumption, wear of the actuator, and protects the valve from excessive forces.
Stroke Position Indicator	Gives visual indication of valve operation, provides automatic adjustment of stroke indicators during first cycle of operation.
Status Light-Emitting Diode (LED)	Gives visual indication of actuator status and assists with diagnostic.
Optional Integrated Auxiliary Switches	Provides adjustable switch points with line voltage capability.
Integral Cable with Colored Conductors	Simplifies installation and field wiring.
Integral Connector for 3/8 in. (10 mm) Flexible Metal Conduit (FMC)	Simplifies installation and field wiring.
Underwriters Laboratories Inc.® (UL) and CE Compliant	Provides internationally recognized regulatory agency approval.

Application overview

IMPORTANT: The VA7800 Series Electric Valve Actuators are intended to control saturated steam, hot water, and chilled water flow under normal equipment operating conditions. Where failure or malfunction of the VA7800 Series Valve Actuator could lead to personal injury or property damage to the controlled equipment or other property, additional precautions must be designed into the control system. Incorporate and maintain other devices, such as supervisory or alarm systems or safety or limit controls, intended to warn of or protect against failure or malfunction of the VA7800 Series Valve Actuator.

VA7810-HGx-2 Series Non-Spring Return Proportional Actuator

The VA7810-HGx-2 Series Non-Spring Return Actuators offer fail-in-place proportional control of valves in HVAC systems regulated by an electronic controller. These actuators are configured for response to 0 to 10 VDC, 2 to 10 VDC, 0 to 20 mA, or 4 to 20 mA. The VA7810-HGx-2 Series can also be custom configured for valve sequencing. The minimum setpoint is 0 to 6 VDC (0 to 12 mA), and maximum input signal is 3 to 10 VDC (6 to 20 mA). A 0 to 10 VDC, or 2 to 10 VDC feedback signal is available for position indication. The actuator features a preset actuator position with a stem that extends or retracts on loss of signal. However, when you select current input, this stem feature is not available.

VA7820-HGx-2/VA7830-HGx-2 Series Spring Return Proportional Actuator

The VA7820-HGx-2 and VA7830-HGx-2 Series Actuators are Spring Return actuators that provide fail-safe proportional control of valves in HVAC systems regulated by an electronic controller. In the event of power loss, the VA7820-HGx-2 Series Actuators spring return with the actuator stem fully retracted and the valve stem in the full up position. On loss of power, the VA7830-HGx-2 Series Actuators spring return with the actuator stem fully extended and the valve stem in the full down position.

These actuators are configured for response to 0 to 10 VDC, 2 to 10 VDC, 0 to 20 mA, or 4 to 20 mA. Both models of actuators can also be custom configured for valve sequencing. Minimum setpoint is 0 to 6 VDC (0 to 12 mA) and maximum input signal is 3 to 10 VDC (6 to 20 mA). A 0 to 10, or 2 to 10 VDC feedback signal is available for position indication. The actuators feature a preset actuator position with a stem that extends or retracts, on loss of signal. When current input is selected, this stem feature is not available.

Operation

The VA7800 Series of actuators offers up to 1 in. (25 mm) of linear stroke for the operation of Johnson Controls® VG7000 Series Bronze Control Valves. The actuators interface to all threaded stem VG7000 Valves and can be used on all stainless steel trim VG7000 series valves from 1/2 in. to 2 in. The actuator should not be used on brass trim VG7000 series valves from 1/2 in. to 3/4 in. All actuators can be manually positioned by means of a 5 mm Allen wrench.

For non-spring return actuators, engage manual operation by inserting the Allen wrench into the hexagonal socket and pushing down to cut off the power to the motor. Turn the Allen wrench clockwise to extend the actuator stem; turn the wrench counterclockwise to retract the actuator stem.

For spring return actuators, manual operation requires that the power be disconnected. On loss of power, the actuator spring force moves the stem to its fail-safe position. For manual operation, insert the Allen wrench into the hexagonal socket and turn the wrench either clockwise or counterclockwise depending on the actuator model. When you reach the desired stem position, push the wrench down and slightly rotate the wrench in the opposite direction to lock it in position. When power resumes, the actuator is released from its manual position.

Note: After using manual control to position the actuator, it is recommended that a self-calibration cycle be performed to assure proper operation.

VA78x0-HGx-2 Series Proportional Control Actuators

The VA78x0-HGx Series Actuators operate with Proportional Control, On/Off Control, or Floating Control. Changes in DIP switch settings allow the selection of Control Type, Input Signal, Input Range, Action, actuator position at signal loss, and stroke speed. See Table 2 for a detailed reference of DIP switch settings.

Table 2: VA78x0-HGx-2 Series Proportional Control Actuators DIP Switch Settings

DIP Switch Number	Description	State	
1	Control Type	ON	Floating/on/off control
		OFF	Proportional control
2	Input Signal	ON	Current input signal
		OFF	Voltage input signal
3	Input Signal Range	ON	Custom setting
		OFF	Pre-defined setting
4		ON	2 to 10 V (4 to 20 mA)
		OFF	0 to 10 V (0 to 20 mA)
5	Action	ON	Reverse
		OFF	Direct
6	Preset Actuator Position at Signal Loss ¹	ON	Actuator Stem Extends
		OFF	Actuator Stem Retracts
7	Stroke Speed	ON	76 s/in. (3 s/mm)
		OFF	152 s/in. (6 s/mm)
8	Not Used	Not Used	

- Control signal loss position preset does not operate when you select 0 to 20 mA or custom input range control.

Table 4: VA78x0-HGx-2 Series Actuators LED Status and Color Indicators

LED Color			
Status	Green	Yellow	Red
Off	Power off		
Blink	Motor running	Power on after a black-out ¹ Temporary fault, possible valve sticking ²	High temperature ³
Fast Blink	Calibrating	Input signal failure	
Continuous On	Power on, motor not running	Custom calibration value out of range	Generic fault

- After reaching both ends of the stroke, the input signal is recalibrated and the LED switches to green.
- The actuator leaves this mode only if the push button is pressed for at least 5 seconds, and the previously detected error has been resolved.
- This status is temporary. When the detected temperature decreases to the acceptable range, the LED switches back to green.

The VA78x0-HGx Series Actuators are a direct acting and factory supplied set for 0 to 10 VDC Proportional Control. Field setting options exist for standard ranges of 0 to 20 VDC (0 to 20 mA) or 2 to 10 VDC (4 to 20 mA) control in the field. At the end of a span, the actuator control signal has a buffer zone of 0.3 V (0.6 mA) to ensure definite valve close-off.

You can set the actuators for custom signal ranges. Minimum setpoint is 0 to 6 VDC (0 to 12 mA) and maximum input signal is 3 to 10 VDC (6 to 20 mA). Position feedback signal is also available in Table 3.

Table 3: Position Feedback Signal for VA78x0-HGx-2 Series Proportional Control Actuators

Input Signal	Feedback Output
0 to 10 VDC	0 to 10 VDC
2 to 10 VDC	2 to 10 VDC
0 to 20 mA	0 to 10 VDC
4 to 20 mA	2 to 10 VDC
Custom Range	0 to 10 VDC

All VA78x0-HGx-2 Series Actuators feature a multicolored LED that provides operational status and failure analysis information. See Table 4 for a detailed description of LED color indicators.

The actuator microprocessor carries out a failure diagnosis when a failure has been detected. The colored LED indicates the actuator status. When the microprocessor detects that the stem has come to an unexpected stop, it initiates a retry cycle. The retry cycle repeats three times, and if unsuccessful, the actuator switches to fault mode and the LED flashes yellow. If the problem is cleared, the actuator continues to function normally.

The LED also flashes yellow when power resumes after a power loss. The LED continues to flash yellow until the end stop is achieved or a recalibration process is manually started.

Wiring diagrams

Figure 2 show detailed diagrams for the wiring configurations of the VA7800 Series Electric Valve Actuators.

Figure 2: VA78x0-HGx-2 Wiring Diagram

Mounting

When mounting the actuator on a valve, the following precautions are recommended:

- Never cover the actuator with insulating material.
- Allow sufficient clearance to remove the actuator.
- Mount the valve in an upright angle or at an angle less than 90° from the vertical for fluid temperatures up to 212°F (100°C).
- Orient the actuator so that the yoke supports are one above the other when mounting the valve horizontally.

- Install the valve with the stem horizontal and insulate the pipe to minimize heat transfer to the actuator for fluid temperatures above 212°F (100°C).
